EXPERIENCE

Oxford Medical Simulation — SDET

Autumn 2022 - PRESENT

As the lead SDET for Oxford Medical Simulation, I spearheaded the development of our automated testing suite and in-housed our build pipeline. Using a combination of TeamCity, Nunit, and GameDriver.io we have built a test library to improve the reliability of 250+ medical training scenarios.

Lockwood Publishing — Coretech Engineer / Automation Engineer

Spring 2020 - Autumn 2022

Work on underlying core technologies such as asset content delivery and QA automation systems. Used Unity to develop a leading social platform mobile game. Used C# and Perforce for version control. Maintained and refactored old code bases and upgraded outdated libraries.

In charge of maintaining and updating QA automation scripts. Along with building visualization dashboards for the results of tests. Working in C# on the client, python for the testing, and ReactJS for the dashboards.

Sumo Digital — Games Programmer

Summer 2017 - Spring 2020

Worked on Team Sonic Racing for a year and a quarter. This was an eighty-person project. Primarily worked on the Team Adventure Mode for the game but also on many low-level optimizations, mechanics prototyping, the progression system, and audio code.

I also worked on an AAA online multiplayer realistic racing game. Worked primarily on UI code and core gameplay features. Used C++ with two different in-house engines during my time at Sumo Digital.

EDUCATION

University of Gloucestershire — BSc Games Programming

1:1 in Games Programming BSc at the University of Gloucestershire. Studied a wide range of topics including, neural networks, multiplayer code, games dev life-cycle, graphics GLSL, all in C++ or C#

SKILLS / Technologies

C++, C#, Typescript, ReactJS, Python, MySQL, P4V, Git, GameDriver, Jenkins, Jira, TeamCity

Professional experience in Unity and in-house engines.

Experience with Pcdx11, GNM, NX.

Find it easy to jump into large code bases.

Experience in shipping large-scale console, mobile, and VR titles.
